

SYSTEM FLOWS — GRAND VISION

System Flows

WaMPaS — Grand Vision

v2.0 · Richard Uzor — May 2026 · Devstrike Digital Limited

01 — FLOW INDEX

This document covers the complete user flow system across all three platform layers. Phase-specific flows are documented in Phase 1, 2, and 3 System Flow documents. This document covers the cross-layer flows and the full mature-state system.

02 — AUTHENTICATION & IDENTITY

1. Entry

- User arrives at any page. System detects: authenticated account, guest, or new visitor.
- Guest: full read access immediately. Post limit enforced by cookie + IP.
- Account: full access based on role (user / elder / pastor / admin / hq).

2. Registration

- Form: name, email, password, church (optional).
- Email verification sent via Resend.

- On verify: account activated, user redirected to feed with welcome banner.

3. Single Identity Across All Layers

- One login spans Archive, Events, Feed, Fellowship Rooms, Prayer Rooms.
- Role upgrades (elder, verified pastor) added to same account — no re-registration.
- Account deletion: soft-delete. Content attributed to '[deleted user]' — archive integrity preserved.

03 — ARCHIVE FLOWS (ALL PHASES)

1. Post Message

- Guest KYC gate (name+email, cookie count check). Account: skip gate.
- Form: message text (DM Serif preview), pastor typeahead, church, date, category, Bible ref, event (optional).
- Submit → POST /api/v1/messages → success → message detail page + share prompt.

2. Message Detail Interactions

- React (no account required). Share (native share sheet + quote card). Save (account only).
- Q&A: one question per user. Pastor email notified if contact on file.
- Report: reason picker → 3 same-category reports → poster notified → 5 total → admin queue.

3. Pastor / Church Profile Lifecycle

- Created by account user. Mutable fields: any account user can edit.
- Immutable fields (name, founding date): edit request goes to support.
- Verified status: application + annual fee → admin approval → blue check displayed.

04 — EVENTS LAYER FLOWS

1. Concluded Event

- Browse → view event → tabs: Messages / Pastors / Testimonies / Fellowship Room.
- Submit testimony: KYC (guest) or account prefill → text → moderation queue → published.
- Testimony marked 'Answered Prayer' by poster → enters answered prayer archive.

2. Upcoming Event + Sponsorship

- Create event (account only) → form: name, church, dates, location, theme, pastors, image.
- Ad subscription prompt: Tier A/B/C → Paystack checkout → on success → Sponsored badge activated.
- Save to Calendar → Google Calendar OAuth → calendar event created via API.

05 — SOCIAL LAYER FLOWS

1. Public Feed

- Post: text, scripture, archive share, photo. All posts attributed — no anonymous posts.
- Feed ranked: recency + reactions + followed pastors/churches.
- React: Amen / Fire / Praying. Comment: threaded, flaggable. Share: native share.

2. Fellowship Room Lifecycle

- Create room: name, type (cell/Bible study/topic/open), linked church (optional), privacy (open/invite).
- Owner assigns up to 3 elders. Elders can warn → mute → remove members.
- Post: text, archive links, scripture. No external links without elder approval.
- Room linked to church profile: visible on church's Rooms tab.

3. Prayer Room — Async Mode

- Post request: text, anonymous toggle (hides name, preserves account link for moderation).
- Intercessors tap 'Standing in Agreement' — count visible on request.
- Original poster marks request Answered → writes testimony → enters answered prayer archive.

- Admin reviews anonymous requests before publishing if flagged.

4. Prayer Room — Live Mode

- Verified pastor or elder creates session: title, duration (30–90 min), room.
- Members join session. Leader posts prompts. Members respond in structured turns.
- Session ends: transcript archived in room history. Highlighted on pastor's profile.

5. Direct Messaging

- Account users can initiate DM with any user who has DMs enabled.
- Messages governed by community standards — reportable, reviewable by admin.
- Unacceptable content in DMs: same offence escalation as public content.

06 — ADMIN & MODERATION

Action	Trigger	System Response
Review flagged message	5+ reports	Admin: Approve / Remove / Warn / Ban poster
Immutable field edit request	User support email	Admin verifies, edits, notifies user
Testimony moderation	New submission	Admin approves or rejects — published on approval
Elder report escalation	3 room warnings	Admin reviews, may extend to platform suspension
Verified profile application	Application + payment	Admin verifies identity, activates badge
HQ dashboard access	Signed licence agreement + payment	Admin provisions HQ role on denomination account
Live prayer room oversight	Session in progress	Admin can end session if reports received during live session
